Asian Trading Hours

October 2024

European Market Review

“European markets and investors remained non-committal in October with both the risk and return of the STOXX Europe 600 index continuing their slow decline from their recent summer highs. Europe is currently economically and politically weak which prevents the opportunity for strong fiscal stimulus, leaving only monetary policy as a focus for investors and support for markets. Average daily volume of the index constituent remained well below their levels in the first half of the year and was concentrated in just two sectors, financials, and industrials. Winners in October continued to be stocks with a more defensive style like low PE, low volatility, large-cap value stocks, indicating that although sentiment has risen from its September bearish lows to more positive levels, investors are still far from bullish. Monetary policy alone will not be enough to start another leg of the current two-year-old rally, especially with the results of the US presidential election looming over the future of global trade.”

Olivier D'Assier, 31 October 2024
Head of Applied Research – APAC, Qontigo

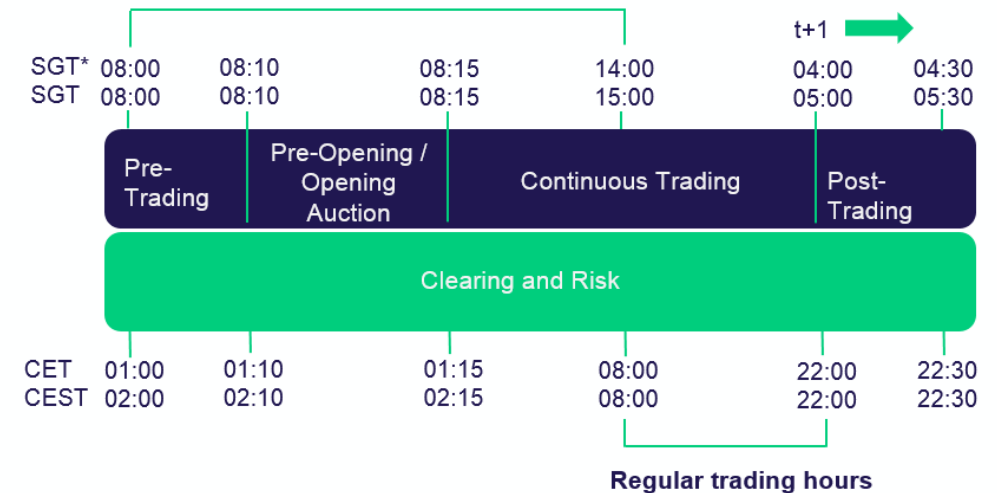

Trade Europe around-the-clock

Trading during the Asian hours has developed steadily over the years, with strong monthly volume growth with improved orderbook liquidity

Monthly traded volume development

Extended trading hours for select liquid futures

Since extension in December 2018, the market had witnessed multiple risk events and defining moments, such as the COVID-19 pandemic, Russian-Ukraine conflict, interest rate hikes, and more recently, the banking crisis. Through and through, the Asian hours remained robust and provided investors access to liquidity to meet hedging needs.

Why crypto at Eurex?

The trusted path to crypto

The cryptocurrency market continues to grow in popularity as more market participants enter this market and look for new instruments to implement trading strategies.

- 2 fiat currency denomination available
- Available for trading 21 hours, 5 days a week
- 1:1 ratio with spot Bitcoin
- Monthly expiring contracts
- Utilize existing trading and clearing set up as other Eurex products
- Launching of ETH futures on 12 August

Trading on a Regulated Exchange

Eurex is a renowned regulated exchange, with best-in-class trading platform and robust safeguards offering multi-asset class trading.

Trusted index provider

Eurex has partnered with FTSE Russell and DAR to provide Benchmark Regulation (BMR) compliant index for the Bitcoin futures.

Seamless access to cryptocurrency

Gain exposure via your existing trading accounts without the need for additional account or infrastructure setup.

Robust risk management

All trades at Eurex are risk managed and cleared in an AA-rated clearing house, with no auto liquidations or counterparty risk.

Achieve capital efficiency trading global indices on Eurex

Efficient portfolio margining approach with Eurex PRISMA

Portfolio	Product name	Eurex code	BBG code	Long	Short	Net	Net Notional (in EUR)	Initial Margin (in EUR) per product	% of Margin vs Notional	Total Initial Margin (EUR) per product	Initial margin (with Portfolio Margining)	Margin Savings
FESX	EURO STOXX 50	FESX	VGA Index	32,000	20,000	12,000	515,640,000	37,714,656	7.31%	149,137,608	51,746,145	65%
add FDAX long	DAX	FDAX	GXA Index	1,000	-	1,000	395,425,000	31,096,057	7.86%			
add FMWO short	MSCI World	FMWO	ZWPA Index	-	6,000	(6,000)	506,220,000	26,270,940	5.19%			
add FMEA short	MSCI EM Asia	FMEA	ZTWA Index	-	4,000	(4,000)	214,560,000	13,612,998	6.34%			
add FMCH long	MSCI China	FMCH	MURA Index	7,500	-	7,500	157,170,000	14,223,485	9.05%			
add FMIN long	MSCI India	FMIN	ZVLA Index	1,500	-	1,500	134,940,000	11,541,996	8.55%			
add FMJP long	MSCI Japan	FMJP	FMIA Index	3,500	-	3,500	236,421,500	14,677,476	6.21%			
Total							2,160,376,500	149,137,608	6.90%		2.40%	

*Calculation Date: 16 August 2023

In this illustration, the unnetted margin of the sample portfolio is at 6.90%. With the PRISMA model, portfolio margin offset resulted in 2.40%, a margin savings of 65%. In general, the better a portfolio is balanced, the higher the margin offsets under PRISMA will be.

Eurex is in a unique position to generate margin offsets given its open interest pool of over 100 million lots in Equity & Index derivatives that can be used to offset against each other. Equity index products hereby include STOXX, DAX, SMI, MSCI and FTSE.

Eurex T7 Entry Services (TES)

The TES enables participants to enter off-book transactions into the Eurex System

Block Trade

Supports bilateral, off-book trading of standard Eurex products.

Multilateral Functionality

Enables processing of multilateral Block Trades with up to multiple counterparties.

Brokerage Functionality

Accessible to brokers to book trades directly into the account of the beneficiary member without being part of the trade.

Flexible Contracts

Supports off-book trading of tailor-made Futures (expiration date, settlement type) and Options (exercise price, expiration date, exercise style, settlement type) contracts.

Volatility Trade

Allows an off-book trade in Futures contracts with a quantity smaller than the minimum block trading size to hedge an Options position

Exchange for Physicals

Allows an off-book trade with a quantity smaller than the minimum block trading size to hedge a physical/cash position

Exchange for Swaps

Allows an off-book trade with a quantity smaller than the minimum block trading size to hedge a swap position

Trade at Index Close

Supports the entry of off-book trades in Equity Index Futures based on the combination of the next available index closing price plus basis

MSCI basis trading

Trading a calendar spread between the daily and quarterly future replicates basis trading

Market on Close (MoC) T+X allows fully automated and operational efficient basis trading via a calendar spread between the daily expiring and standard target futures.

In a single trade, you can go short the daily and long the quarterly futures, meaning you have paid the basis and the index close – once the daily leg expires. Everything works using just one product and in the same manner as a quarterly roll.

The new solution is the first of its kind and adds flexibility, reduces operational efforts, increases the transparency of the basis and mitigates counterparty risk.

KEY ARGUMENTS:

- Touch the trade only once on the trade date
- Trade entry time is at the time of execution, processed and reported immediately
- No counterparty risk. All legs are directly in the CCP risk framework
- Full flexibility of trading channels: on-screen, EnLight or TES.

What are the key benefits?

Flexibility

The new Market on Close (MoC) T+X functionality allows trading MSCI futures as a block trade or via the order book.

Ease of execution

Just trade the calendar between the daily expiry (T, T+1 or T+2) and the standard quarterly futures you want to trade based on close and you're done. All this happens within the same product and not a separate trade for the basis. No clearing operations are needed to book from a basis product into the futures.

Reduced operational efforts

There's no need for further price confirmations or additional tasks after the index close is available. This also means that each trade only needs to be considered once. This brings the positive side effect that the trade shows the correct trade date, namely when it was initially agreed.
